MORGAN
AND ALLEN

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved. The next step is to define the goals and objectives of the project. This involves determining what the system is intended to achieve and how it will be evaluated. The third step is to design the system architecture. This includes defining the overall structure of the system, the components, and the data flow. The fourth step is to implement the system. This involves developing the code, configuring the hardware, and testing the system. The final step is to maintain the system. This involves monitoring the system's performance, updating it as needed, and troubleshooting any issues that arise.

7. The function $f(x)$ is defined by
 $f(x) = \begin{cases} 2x^2 - 5x + 3 & \text{if } x \leq 1 \\ 3x - 2 & \text{if } x > 1 \end{cases}$
 Find $f(0)$, $f(1)$, and $f(2)$.
